Eco-friendly, Truly Green!

Mother's Corn Baby

Mother's Corn Bubble

Mother's Corn

Mother's Corn Kitchen

Mother's Corn knows what the mothers want for their babies. Mother's Corn is safe and friendly for children and the environment. Let babies and kids enjoy meals with Mother's Corn, free from harmful ingredients.

What about PLA?

The products of Mother's corn from nature and biodegradable.

The biodegradable plastics of Mother's corn are as strong and easy to use as the traditional plastics, and they are unlikely to persist in the environment, therefore they can make our environment less polluted.

Mother's corn is the best replacement for the conventional plastics.

Mother's Corn's Feature

SAFE

1. BPA Free

As the Mother's corn products made of corn are free from not only environmental hormone but also other hazardous ingredients like carcinogenic substance, heavy metals and the like, they can be used to serve hot food or even damaged or babies can bite or suck (gum down) them without any problem.

2. Using non-toxic ink

As non-toxic ink certified by an accredited agency is used in character design printed on Mother's corn products, babies can bite or suck (gum down) them safely while they are being in use.

In order to ensure that babies be fed meals in a safer manner, designs are not inserted where their mouths or meals are supposed to contact them.

Mother's corn baby's motto, like maternal mind, is "baby's health and safe meal be given priority over design."

GREEN

1. Less CO₂

As Mother's corn containers are made of ingredients sourced from the nature, CO₂ are not emitted while those ingredients being produced. They absorb CO₂ to the contrary and do not use depleting petrochemicals detrimental to the global environment.

2. Biodegradable

When Mother's corn products rendered unusable are buried underground, they are 100% biodegraded by microorganism in soil and returned to soil. The speed at which they are biodegraded varies depending upon the type of containers and environmental conditions like microorganism in soil etc.

GOOD

1. Durable product

As Mother's Corn products, though made of corn ingredient, have same durability as plastic products made of petrochemicals, the former is not easily broken even when dropped.

2. Can be used with Microwave oven

As a result of incessant research effort by Mother's corn's in-house research institute, excellent heat resistant Mother's corn baby product has been born. Being the first one of corn-made containers ever created in the world to survive heat exposure in microwave oven as well as hot water disinfection, it is convenient to use.

World in Mother's corn

Certificate

Safety certification

We have obtained container safety certification by Technical and Test Institute for Construction Prague. (Certificate No. 100-027811)

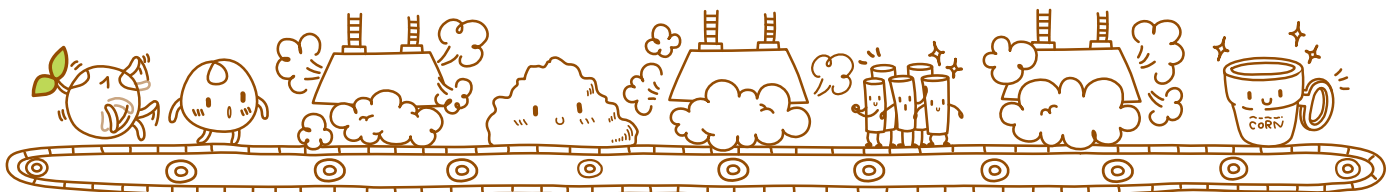

Microwave Safe

We have obtained Microwave oven Safe certification by Technical and Test Institute for Construction Prague. (Certificate No. 100-041352)

How to make Mother's corn?

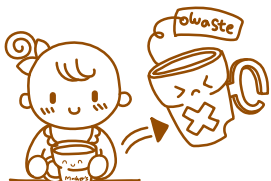

1 Corn

2 Starch

3 PLA Resin

4 Products

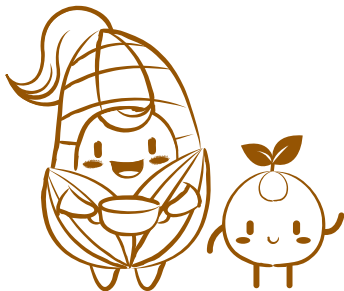

5 Decomposition

6 Earth
